LMU MSBA Capstone Project

Project Title: Confronting the confusion around healthcare bills

Company Name	Cedars-Sinai Health System
Sponsoring Organization Name	
Sponsoring Organization Address	8700 Beverly blvd, Los Angeles, CA 90048
Proposal Liaison *(person who will work with us on this proposal)*	Diego Estuar
Legal Liaison *(person who will be our key point of contact during NDA execution)*	Name: Matthew Wells Title: Manager, Advanced Analaytics Email: matthew.wells@cshs.org
Project Liaison *(person who will be our key point of contact during Project execution)*	Name: Matthew Wells Title: Manager, Advanced Analaytics Email: matthew.wells@cshs.org
Intern Positions *(are summer intern positions available while the student team works on the project)*	No summer intern positions available at this time

1. Project Description

(Provide background and contextual information. Define the analysis problem. Clearly identify project goals and deliverables. State the value this analysis will bring to your Organization. Note that the analysis problem must be stated in terms of a product or result that can be accomplished using some form of descriptive, predictive, or prescriptive analytics by a team of 3-5 students in 12 weeks.)

Click or tap here to enter text.

Getting a bill (either from a hospital, insurer or other 3rd party provider) after a hospital stay is often a stressful, scary experience. Even people with experience in the industry are often confused by what is on there. The proposed project would aim to help resolve that fear by providing patients with an AI generated explanation of all items on a bill, a list of resources to reach out to and a set of talking points or questions to ask when reaching out to those resources. This project would focus on building and validating this AI system to hand off to a Cedars team for integration into existing business systems.

2. Business Impact

(Describe how you believe this project will impact your organization in terms of qualitative improvements, cost savings, ROI etc.

Cedars-Sinai is focused on revenue cycle and the patient financial experience. In particular, the organization has set goals around making it a more seemless and unstressful experience for our customers. This project will help by qualitatively providing those customers with a means to better understand not only the potential bills coming from Cedars, but also preparing them for any potential discussions they would need to have with other stakeholders in the healthcare system. Our quantitative expectation is that this will help to increase patient satisfaction with the health system experience.

3. Stakeholders and End Users

(Please identify the end-users who will be the direct beneficiary, using or interacting with the artifacts developed in this project)

The direct beneficiary is the patient. BIlling customer service would also indirectly benefit as fewer calls would be routed to them. The revenue cycle team and the AI team would serve as the support system for students in this project.

4. Data Sources and Description

(Provide information on the data you will share, including variables, type, granularity, time-period, number of records, and approximate total size in bytes. Provide information on how you will share this data, including mode of access, platforms, frequency, and format. Confirm that you will be able to provide access to this data by Mar 17th.)

The data to be shared would consist simply of patient sets with insurance coverage information. This would be mocked up data. All other necessary data (including potential bills) would be AI generated as part of the project. If necessary, information will be made available through a virtual desktop environment.

5. Data Confidentiality / Data Privacy / Data Access Requirements

(Provide information on any specific organizational requirements with respect to Data Confidentiality and Data Privacy, such as, (a) can the data be stored in a cloud such as AWS for the project? (b) will the data need to be anonymized (c) will the students have access to your organizational data sources? etc.)

All non synthetic or mocked up data will need to be stored within Cedars environments (either on a Virtual desktop environment or on a Cedars workstation). Students will not have general access to internal databases.

6. Technology Description

(Provide information on any specific Platforms and Tools that you might require the students to use for data analysis, and if so, confirm that you will be able to provide access to these by Dec 1st. If there aren't any, say "none".)

The students will need to work within a JupyterHub development server and a generative AI platform, both of which will be made available to them.

7. Preferred Analytics Methods & Project Management Methods

(Provide information on any specific methods or techniques you might require the students to use for data analysis and project management (e.g., waterfall, agile etc.). If there aren't any, say "none".)

The agile method is prefered for development on the AI team

8. Meeting Schedule

(The MSBA Capstone Projects have the following milestones to ensure the Project stays on course. Identify the person from your organization who will be the primary liaison with the students and faculty. We recommend the liaison meet with the students and faculty advisor on a weekly basis. The liaison will be responsible for providing data that the students will be using for the capstone. The liaison will also attend the kick-off and final presentations).

Meeting	Date (Fridays)	Attendees
Project Proposals Intake	**February 11, 2026**	MSBA team, Advising Faculty **Host organization representatives**
Project Kickoff **(major data is in)**	**March 31, 2026**	MSBA Team, Advising Faculty **Host organization representatives**
Weekly Sync	**May 18-August 7, 2026**	MSBA Team, Advising Faculty ***(Preferably at least 30 minutes weekly committed by Liaison)***
Kick-off Presentation	**June 12, 2026**	MSBA Team, Advising Faculty **Host organization representatives**
Final Presentation	**August 7, 2026**	MSBA Team, Advising Faculty **Host organization representatives**

9. Deliverables

(Clearly identify key deliverables required of the student team. The MSBA Capstone Projects require a mid-term presentation, a final presentation, and a final report. If you would like additional deliverables, add those to the table.)

(a) **LMU Student Team Deliverables:**

Deliverable	Date (Fridays)	Description
Kick-off Presentation	**June 12, 2026**	Problem statement, scope, assumptions, analytic plans, data requirements and next steps
Final Presentation	**August 7, 2026**	Problem statement, business value, scope, assumptions, methodology, results and conclusions, limitations, possible extensions.
Final Report	**August 9, 2026**	Final reports will be shared with host organizations.
Software and related documentations	**August 9, 2026**	The student team will hand over all software code, application, models, output, and related documentation necessary to continue or implement the solution arrived at in this project.
(specify additional)		

(b) Client Deliverables:

Deliverable	Date (Fridays)	Description
Student and Faculty Instructor Access to required IT Systems	**March 31, 2026**	LMU Students and the faculty instructor should be able to access Client IT systems necessary to carry out the project.
Data	**April 10, 2026**	All required data will be made available to LMU students and the faculty instructor. Client will arrange to provide exports of data from the back-end servers when such data is not accessible directly by the project team.
Servers	**April 10, 2026**	Client will provide necessary server or systems where the data is made available and necessary programming and analytical tools (such as Python, Tableau, Excel etc.) are available or can be installed. Such a server should be accessible to the project team remotely in a development-friendly manner (such as via cloud virtual servers like AWS or Azure or Google Cloud).
Subject Matter Expert	**April 10, 2026**	Client will engage a subject matter expert with the knowledge of the business operations to the project team to participate in weekly meetings, questions from the students, solution brainstorming, student presentations and feedback.
IT Liaison	**March 31, 2026**	Client will make a management representative available to the project team to help in coordinating matters involving data, servers, team access, programming tools, data security issues, etc., with the Client corporate IT management.

10. Key Success Criteria

(Clearly list key outcomes expected from the student team in terms of KPI, and business implications. Please also indicate whether the project needs future improvement work or

extensions (i.e., next year's student team could continue on the project.)

Students are expected to provide a codebase for the application, along with specific metrics displaying the success rate for the application in clearly identifying correct information (e.g. hallucination rates, precision and recall against labeled data, text differentiation scores against labeled data, etc.)

11. Additional Comments

(Please share with us any additional comments regarding the project so we can take it into consideration when advising the student team.)
